### HL-C

#### ELECTRONIC LOCK

## Feature

#### Advanced RF Microwave technology

##### RF Card

- The master card can be programmed for each type of necessity in order to satisfy even the most particular requests.
- All the operations of opening, key and card, are always recorded in the lock audit trail.
- 15 different types of cards can be created so as to satisfy all the hotel staff positions.
- At the appointed check out hour the guest's card will reset automatically and no longer allows the room opening.
- Each guest's card can be programmed to open more than one lock, depending on the requirements of the hotel.
- The card capacity is 1024 bytes, divided into 16 sectors each one with independent password.
- Each card has its own antenna and has a unique serial number of 32 bits.
- The writing and reading distance is about 2.5 cm.
- The average life of the card is around 100.000 operations.
- Cards are antimagnetic, waterproof and antistatic.
- It is possible to personalize cards with customer graphics.

##### The Lock

- Two types of finish are available: Satin Brass or Satin Chrome.
- The lock is powered by 4-1,5 Volts alkaline batteries size AA (not included).
- Audit trail of the last 200 opening operations.
- Panic proof device
- There is also a key that in case of emergency can open the lock mechanically.
